

Claude Code + Caraer

Connect Claude Code to your Caraer account
on Windows — in three short steps.

Takes a few minutes · No technical knowledge needed

Before you start, you only need:

- A Windows computer with an internet connection
- Claude Code installed — not yet? See page 4 to install it first
- Your Claude account (the one you use for Claude / Claude Code)
- Your Caraer login — the e-mail address and password you use on caraer.com

The three steps

- 1 Connect Caraer with one command
- 2 Log in to Caraer
- 3 Pick your company and create a private app — done

First time on this computer? Install Claude Code first — page 4 shows you how.

Part 1 — Connect Caraer

1

Add the Caraer connection

Open PowerShell: click the Windows Start button, type powershell, and press Enter. A blue window with white text opens — this is where you type the commands from this guide.

Copy the command below, paste it into PowerShell (a right-click pastes), and press Enter — replacing portalname with the name of your Caraer portal, for example caraer-gartenlux. It is one single line, and you only need to do this once per portal.

```
claude mcp add --transport http caraer-portalname https://v2.api.caraer.com/api/v2/mcp
```

Claude Code not installed yet on this computer? Do the three steps on page 4 first.

2

Log in to Caraer

Start Claude Code by typing claude and pressing Enter. (The very first time it asks you to log in to your Claude account — follow the browser instructions, then return to PowerShell.)

Then type /mcp and press Enter, select your caraer-portalname connection with the arrow keys, and press Enter again. Your browser opens the Caraer login page — log in with your Caraer e-mail and password.

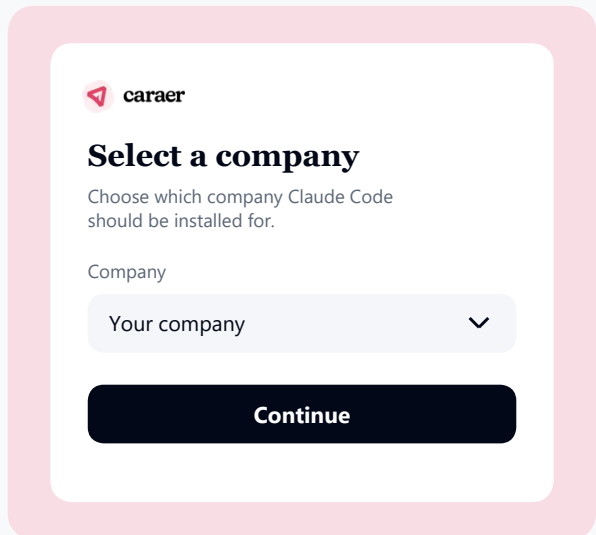

```
claude  
/mcp
```

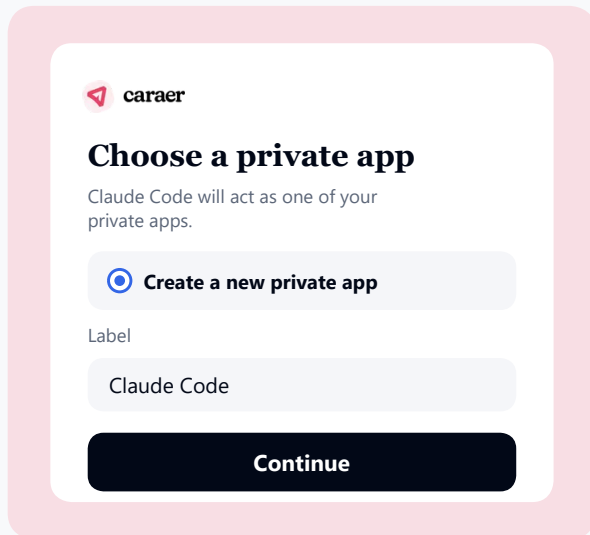

Part 2 — In the browser

3

Pick your company and create a private app

After logging in, Caraer asks two short questions in the same browser window. Answer them exactly as shown below, then go back to the PowerShell window.

1 — Choose your company, click Continue

2 — Create a new private app, click Continue

You're done!

Claude Code is now connected to Caraer. In the /mcp list, your caraer-portalname connection shows as "connected". From now on you can simply start claude from PowerShell and ask it to work with your Caraer vacancies, campaigns and candidates.

Stuck on a step? Screenshot the PowerShell window and send it to your Caraer contact person.

Installing Claude Code

Only needed once, on a computer that does not have Claude Code yet. Do this before Part 1.

A Open PowerShell

Click the Windows Start button (bottom-left of your screen), type the word powershell, and press Enter.

B Install Claude Code

Copy the command below, paste it into the PowerShell window, and press Enter. Wait until the installation says it is finished (this can take a minute).

```
irm https://claude.ai/install.ps1 | iex
```

C Restart PowerShell and check it works

Close the PowerShell window completely, then open a new one (Start button, type powershell, Enter). This step matters — the new window is what makes the claude command available.

In the new window, type the command below and press Enter:

```
claude --version
```

If you see a version number, it worked — continue with Part 1 on page 2. If you see "claude is not recognized" instead, use the fix below.

Fix: "claude is not recognized"

This means Windows cannot find the program yet. Copy the command below into PowerShell, press Enter, then close PowerShell and open a new window again. After that, claude --version will work.

```
[Environment]::SetEnvironmentVariable('Path', "$env:USERPROFILE\.local\bin;" +  
[Environment]::GetEnvironmentVariable('Path','User'), 'User')
```
